

Modeling Pipeline

Modeling Tradeoffs

- Bias vs. Variance
- Inference vs. prediction
- Interpretability vs. flexibility
- Accuracy vs. performance (time)
- Optimization vs generalization

Bias Variance Decomposition

$$\begin{aligned}\text{MSE}(x_0) &= \mathbb{E}_{\mathcal{T}}[f(x_0) - \hat{y}_0]^2 \\ &= \mathbb{E}_{\mathcal{T}}[\hat{y}_0 - \mathbb{E}_{\mathcal{T}}(\hat{y}_0)]^2 + [\mathbb{E}_{\mathcal{T}}(\hat{y}_0) - f(x_0)]^2 \\ &= \text{Var}_{\mathcal{T}}(\hat{y}_0) + \text{Bias}^2(\hat{y}_0).\end{aligned}$$

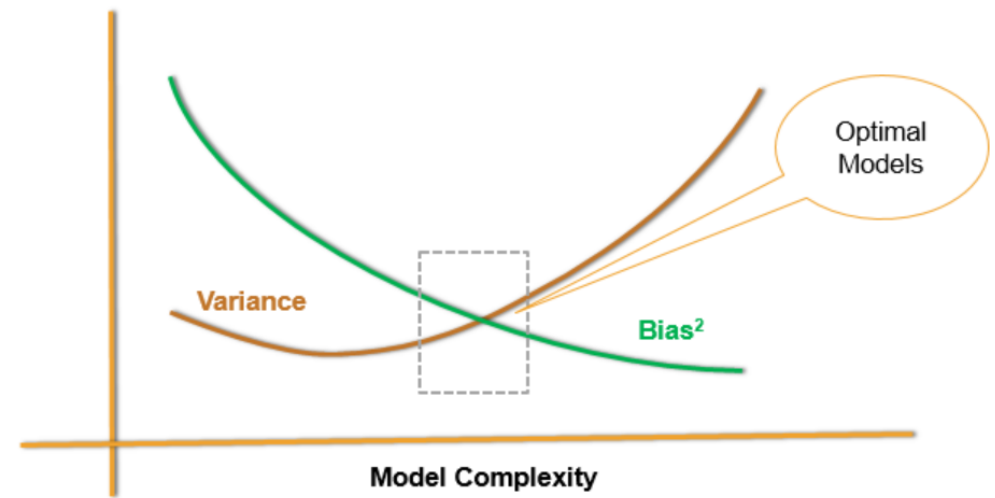

Bias and Variance

Test and Training Error

Bias Variance Tradeoff

Optimal Bias-Variance Tradeoff

Interpretability vs Flexibility

Statistics vs Machine Learning

Traditional Statistics

Machine Learning

A Data Science Continuum

White-box modelling

simpler computation, emphasis on introspection, form, causal effects and processes, finding a 'correct' model

Black-box modelling

high computational complexity, emphasis on speed and quality of prediction, finding a 'performant' model
